01 THE IDEA

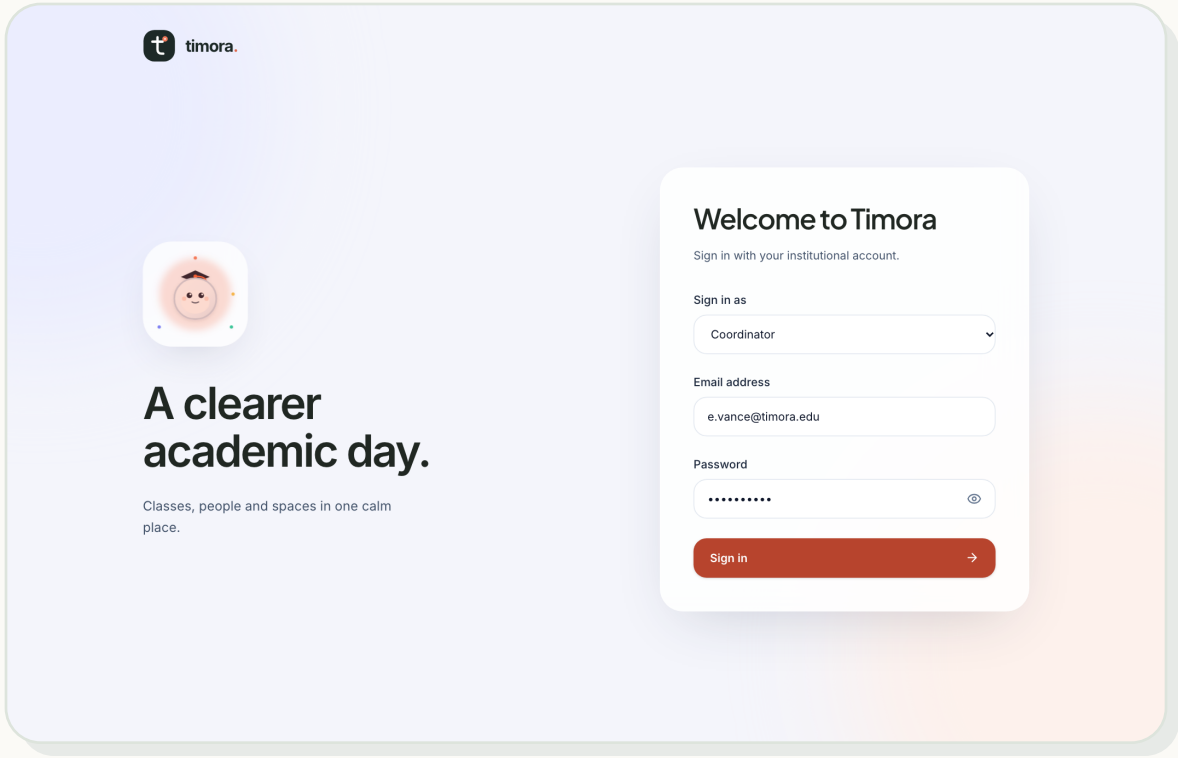

A clearer academic day

One workspace for the people, places, and decisions behind a timetable.

ACADEMIC OPERATIONS

Every timetable change has a ripple effect.

Timora connects scheduling, resource allocation, and conflict review so teams can make changes with context and confidence.

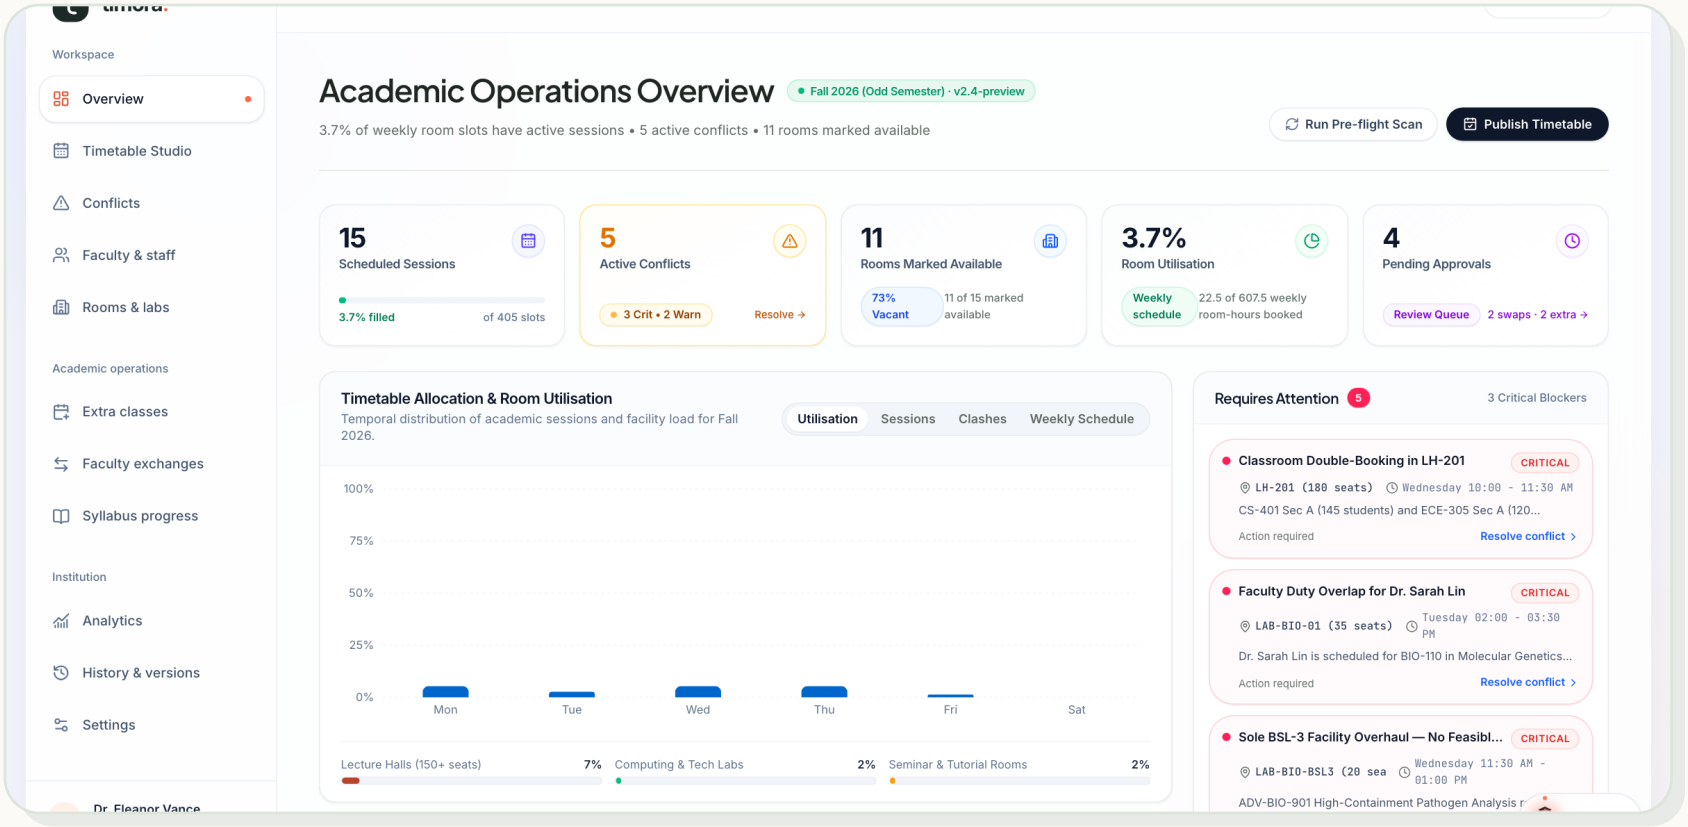

REAL PRODUCT SCREEN / LOCAL BUILD

02 PRODUCT OVERVIEW

The week, in one view

Operational signals and the workflows behind them share the same scheduling records.

See the state

Sessions, conflicts, rooms, approvals, and utilisation together.

Follow the issue

Move from an overview signal to a focused workflow.

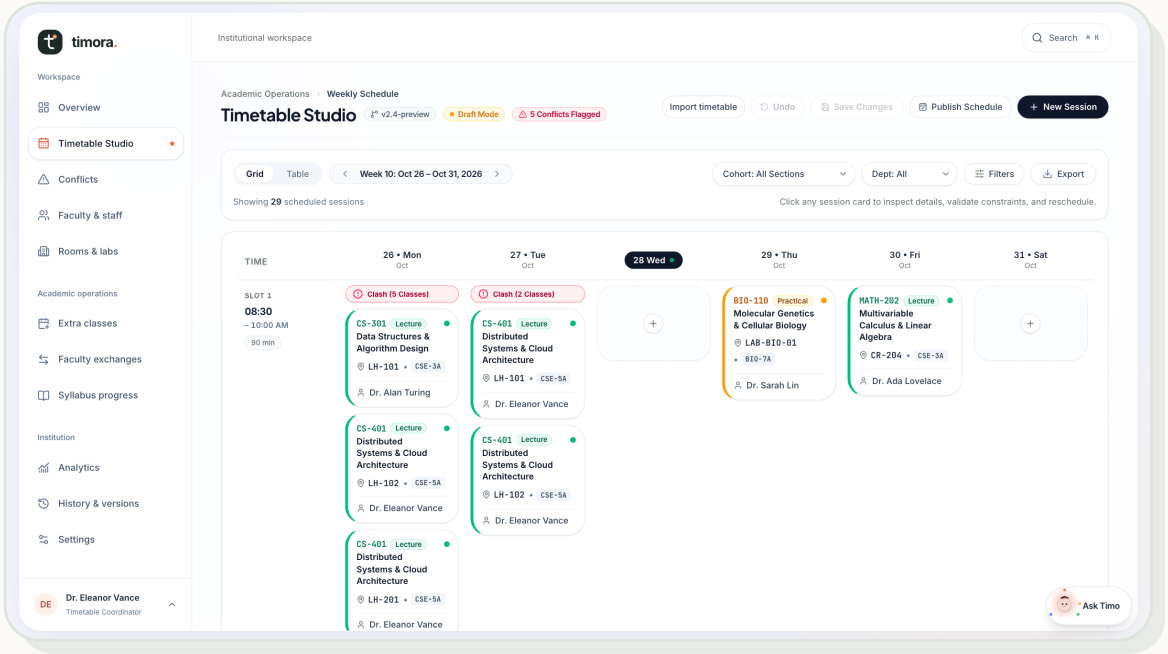

Work across teams

Faculty, rooms, requests, analytics, and history stay connected.

03 SMART TIMETABLE MANAGEMENT

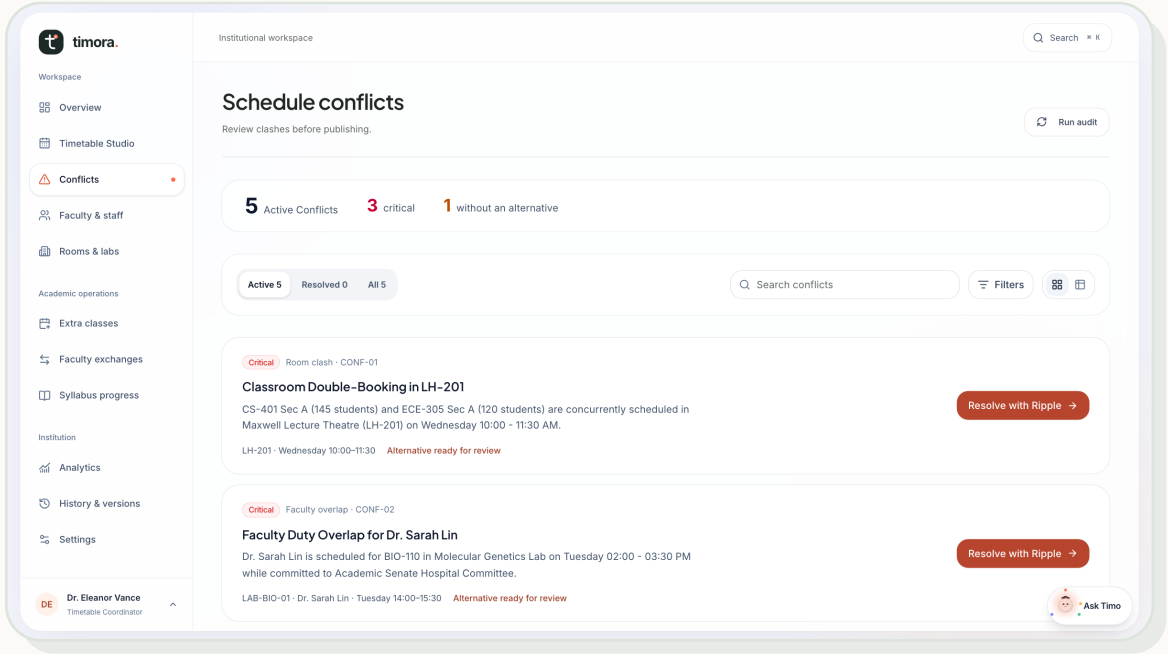

Plan. Check. Resolve.

A coordinator can inspect the week, stage a change, and validate before saving.

TIMETABLE STUDIO

Day-by-day sessions, course, section, room, and teacher.

CONFLICT CENTER

Room and faculty clashes with reviewable alternatives.

CSV + XLSX IMPORT: MATCH / REVIEW / VALIDATE / CONFIRM

04 TIMO AI COPILOT

Answers tied to records

A real CS-401 lookup from the local Timora workspace.

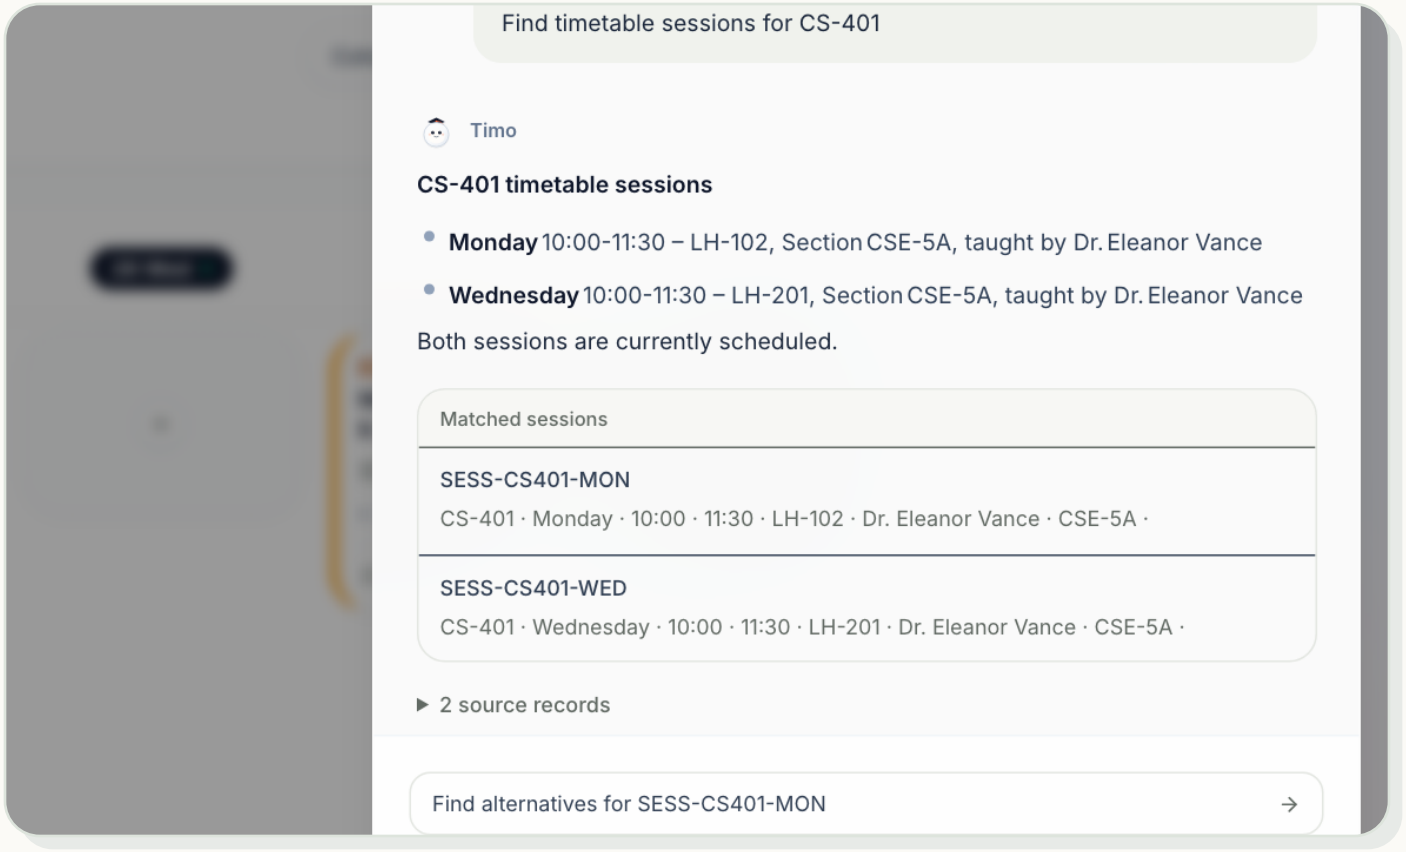

WHAT IT DOES TODAY

Ask in natural language.

Timo retrieves timetable, availability, conflict, workload, syllabus, and version data through bounded tools.

Source records and follow-up suggestions make answers traceable. Supported changes are previewed first and require user confirmation.

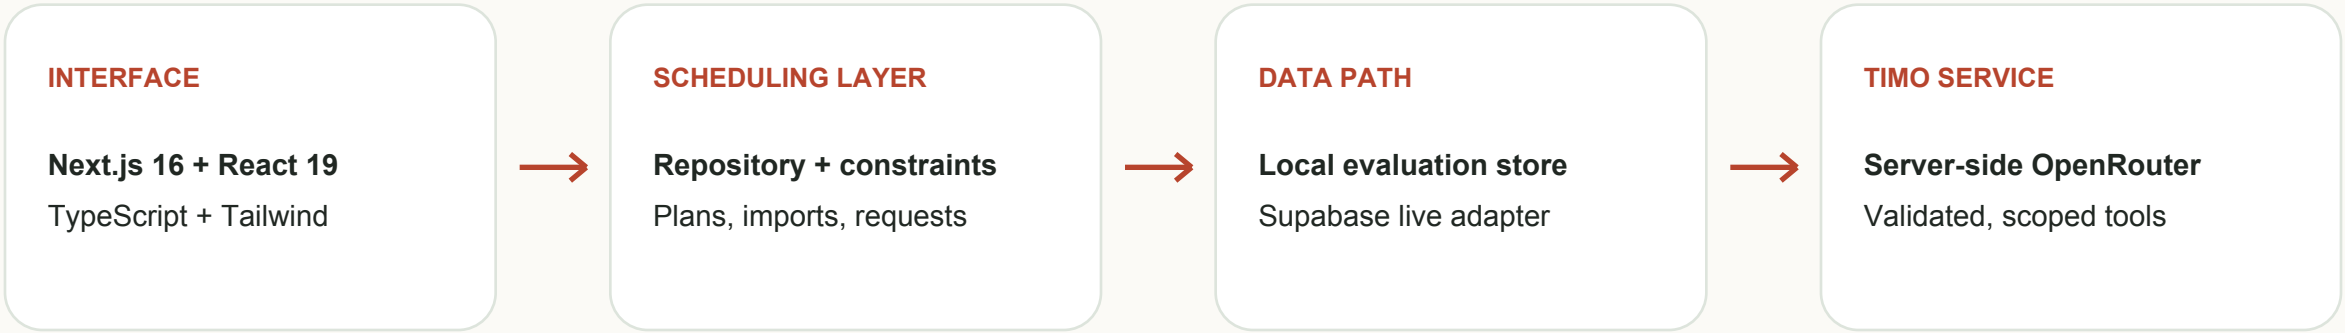

READ > PROPOSE > CONFIRM

05 TECHNOLOGY & ARCHITECTURE

A shared source of truth

The current code separates the interface, scheduling logic, data access, and AI service.

VALIDATION BEFORE WRITE

Constraint checks, role checks, confirmation, audit, and read-after-write verification protect local workflows.

LIVE DEPLOYMENT GATE

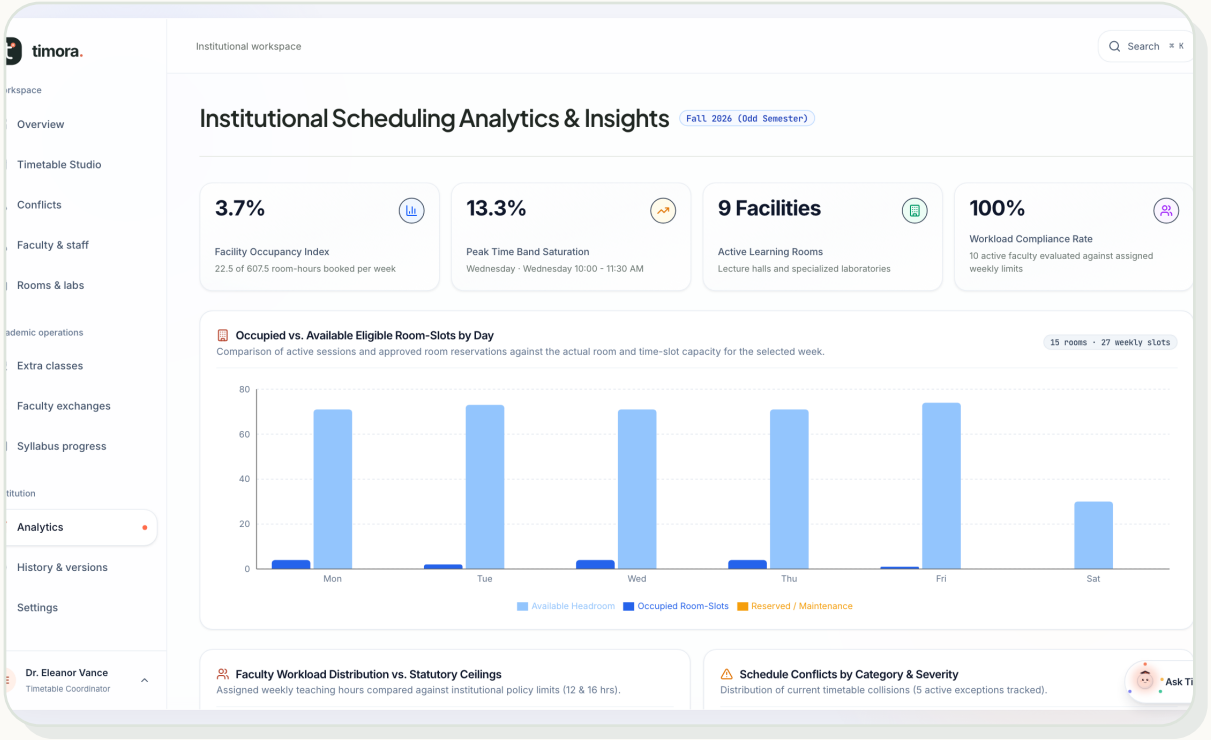

Supabase row policies, transactional writes, and live role tests still require completion.

06 IMPACT & NEXT STEPS

Make every change trustworthy

Timora connects insight, planning, and review in a single academic workflow.

PRACTICAL VALUE

See conflicts earlier. Compare options. Keep a trace of decisions.

ROADMAP TO INSTITUTIONAL LAUNCH

1. Scoped Supabase row policies
2. Transactional, audited live writes
3. Complete exchange consent and application
4. Live permission, recovery, and accessibility tests

The right people. The right place. The right time. A change you can explain.
